

Tejas Mithbavkar

SOFTWARE DEVELOPER

📍 Goregaon 📞 +919076155485 @ tejji.199@gmail.com

SUMMARY

Full Stack Web Developer with 1.5 years of experience, proficient in .NET framework, C#, Angular, HTML, CSS, Bootstrap, and MS SQL for developing robust web applications. Comfortable with GitHub for teamwork and proficient in Postman for API testing and debugging. Capable of handling APIs efficiently. Experienced in creating responsive designs for optimal user experience across various devices.

PROFESSIONAL EXPERIENCE

Digital Automation Enterprises

Software Developer

Nov2023-Present

Mumbai

EDUCATION

University Of Mumbai

Information Technology

JUNE2023-Pursuing

B.Sc IT

Government Polytechnic Mumbai

Information Technology

JUN2018 -JUN2021

Diploma in Information Technology

SKILLS

1.Frontend Development: Proficient in Angular, HTML5, CSS3, and TypeScript. Strong understanding of responsive web design principles and best practices. Experience with JavaScript libraries and frameworks like jQuery.

2.Backend Development: Good understanding of the .NET framework for developing server-side applications. Expertise in writing and optimizing MSSQL stored procedures. Experience with RESTful API development and integration.

3.Database Management: Extensive experience with SQL for data manipulation and retrieval. Proficient in database design, normalization, and query optimization.

PROJECTS

CMS

1.CMS Development: Built a Content Management System (CMS) using .NET, optimizing system performance and ensuring smooth data handling.

2.Dynamic Data Management: Enabled content updates and user interactions with efficient CRUD operations.

3.Database Optimization: Created stored procedures to improve data access speed and system responsiveness.

4.Seamless Integration: Linked back-end services with an MSSQL database for streamlined data operations.

5.Advanced Data Handling: Leveraged Entity Framework and ADO.NET for efficient query execution and data management.

6.Quality Assurance: Followed best practices to maintain high standards of security, performance, and code quality

SAPPHIRE

- 1.Front-End Development:** Built multi-step forms in Angular for user onboarding, including dynamic question retrieval and role management. Used Bootstrap to ensure a responsive and intuitive design.
- 2.Database Management:** Designed stored procedures for managing roles and clients, enabling secure and efficient SQL operations with clear status code handling.
- 3.API Connectivity:** Integrated Angular with back-end services to streamline data flow and enhance the overall user experience.
- 4.Secure Authentication:** Implemented JWT token-based authentication in ASP.NET Core to safeguard application access.

COOP BANK

- 1. API Integration:** Integrated multiple APIs to ensure smooth data flow between the frontend and backend, enhancing the portal's functionality and performance.
- 2. Model Creation:** Designed and implemented new models in Angular and .NET to support the application's requirements, ensuring robust and scalable solutions.
- 3. Frontend Development:** Utilized Angular and TypeScript to develop dynamic and responsive webpages, providing users with an intuitive and efficient banking experience.
- 4. Backend Development:** Leveraged .NET to create and maintain server-side logic, ensuring secure and efficient processing of transactions and user data.
- 5. Database Management:** Developed and optimized MSSQL stored procedures for CRUD operations, ensuring efficient data handling and retrieval.
- 6. Collaboration:** Worked closely with cross-functional teams, including UX/UI designers and QA testers, to deliver high-quality software solutions on time.

BCLUSIVE

- 1. Hotel Booking System:** Developed a responsive hotel booking platform using .NET, ensuring real-time availability and user-friendly booking flow.
- 2. Meeting Room Management:** Designed a smart booking module for managing meeting room reservations with calendar integration.
- 3. Dynamic Availability Checks:** Enabled real-time room availability checks based on date, time, and capacity filters.
- 4. Secure User Management:** Implemented secure login, registration, and role-based access control for different user types (admin, customer, staff).
- 5. Database-Driven Architecture:** Utilized MSSQL with optimized stored procedures for fast retrieval and smooth transaction handling.
- 6. Seamless API Integration:** Integrated external services for payment gateways and email confirmations.
- 7. Responsive UI:** Built a clean, mobile-friendly front-end interface for smooth cross-device user experience.

JUDE

- 1. Frontend Development:** Built dynamic and responsive interfaces using Angular and TypeScript, allowing users to browse, search, and purchase store products seamlessly.
- 2. API Integration:** Integrated RESTful APIs to connect frontend with backend services, ensuring real-time updates for product availability, cart management, and order processing.
- 3. Backend Development:** Utilized ASP.NET Core to handle server-side logic for product catalog, order processing, user authentication, and transaction logging.
- 4. Database Management:** Designed and implemented MSSQL stored procedures for efficient CRUD operations on Products, Orders, and Users.
- 5. Authentication & Authorization:** Implemented secure login and role-based access using JWT for Admin and Customer roles.
- 6. Team Collaboration:** Coordinated with designers and backend developers to ensure smooth data flow and high-performance application behavior.
